

HIPAA SECURITY AUDITS

Preparing for HIPAA Compliance Audits and Risk Assessments

COMPASS helps healthcare organizations (covered entities and business associates) in assessing their HIPAA security compliance and their overall security readiness across the administrative, physical, and technical safeguards. In accordance with 45 CFR Subtitle A §164 HIPAA Security Rule specifications, COMPASS analyzes our clients' internal network devices, existing security policies, and employees, as well as the way electronic protected health information (ePHI) is received, stored, transmitted, and maintained.

COMPASS has developed the following two offerings to replicate the HIPAA Desktop and On-site Audits.

HIPAA SECURITY RULE COMPLIANCE AUDIT

- Administrative Safeguards Analysis
- Physical Safeguards Analysis
- Technical Safeguards Analysis
- Organizational Requirements

HIPAA SECURITY RISK AND VULNERABILITY ASSESSMENT

- Enterprise Risk Assessment
- Network Vulnerability Scans
- Device Configuration Review
- Network Architecture Review
- Firewall and Perimeter Defense Review
- Employee Mock-Phishing Exercise
- Employee Awareness Survey

HIPAA OVERVIEW

Electronic Personal Health Information (ePHI) is one of the most highly regulated types of sensitive information that organizations handle on a daily basis. The Health Insurance Portability and Accountability Act (HIPAA) was created to protect this type of customer data by providing a standard for organizations to create, store, transmit, and dispose of ePHI. Healthcare organizations across the country are finding that developing policies and procedures to meet these standards can be a daunting initiative. To assist organizations in assessing their compliance with HIPAA standards and to identify areas that should be improved, COMPASS has developed a HIPAA Compliance Audit and Risk Assessment Service.

COMPASS leverages over ten years of security architecture and design knowledge and expertise with educational, commercial, federal, and DoD customers to provide a comprehensive and effective approach to our network assessments. We pride ourselves in delivering high-quality, non-biased reports to help our clients "shift the world's data to be safe and secure."
